TAKING WORKER'S SAFETY PERSONALLY

For over 20 years, customers have trusted Concept Controls to help them find the best solutions to their workplace safety challenges. Protecting workers is a vital responsibility for any organization. Beyond the jobs that they do, the men and women in the field are parents, spouses, siblings, friends and neighbours. Customers rely on the expertise, knowledge and experience of Concept Controls to help identify and monitor hazards in the workplace.

Concept Controls takes the guesswork out of finding the right worker safety equipment and supplies. With access to the most trusted and recognized brands, customers enjoy the peace of mind that their workers are using the equipment they need to do their jobs in the safest way possible.

The men and women that drive your business deserve the highest standards of protection and worker safety, and Concept Controls helps you deliver.

GAS DETECTION

Finding the right gas detector, and making sure it is in perfect working order, can mean the difference between life and death in environments where poisonous gases potentially exist. Concept Controls helps find the right gas detector for every application.

Monitoring for a single or multi-gas? Working in a confined workspace? Do you require a mobile wireless solution or fixed-position gas detector? Concept Controls' knowledgeable and experienced sales professionals are there to help, every step of the way.

PROTECTING WORKERS IN THE FUTURE

Being committed to protecting workers doesn't end with buying the right gas detector. Concept Controls helps ensure continuous, accurate performance of all gas detectors to protect workers for years to come.

With a comprehensive device training program, Concept Controls ensures that workers are fully trained on how to get the highest levels of protection from the devices they use. Regularly scheduled device testing and calibration support keeps equipment in compliance, and keeps workers protected.

Trust the gas detection experts at Concept Controls to help find the right gas detectors for every application, and make sure they protect workers now and in the future.

FIXED SYSTEMS SOLUTIONS

With so many gasses, environments, applications and situations, there's no such thing as a one-size-fits-all gas detection solution. Concept Controls' gas detection experts can find the right products to meet any application needs:

Single Gas

Multi Gas

Industrial Fixed

Commercial Fixed

Wireless Detection

Integrated Detection

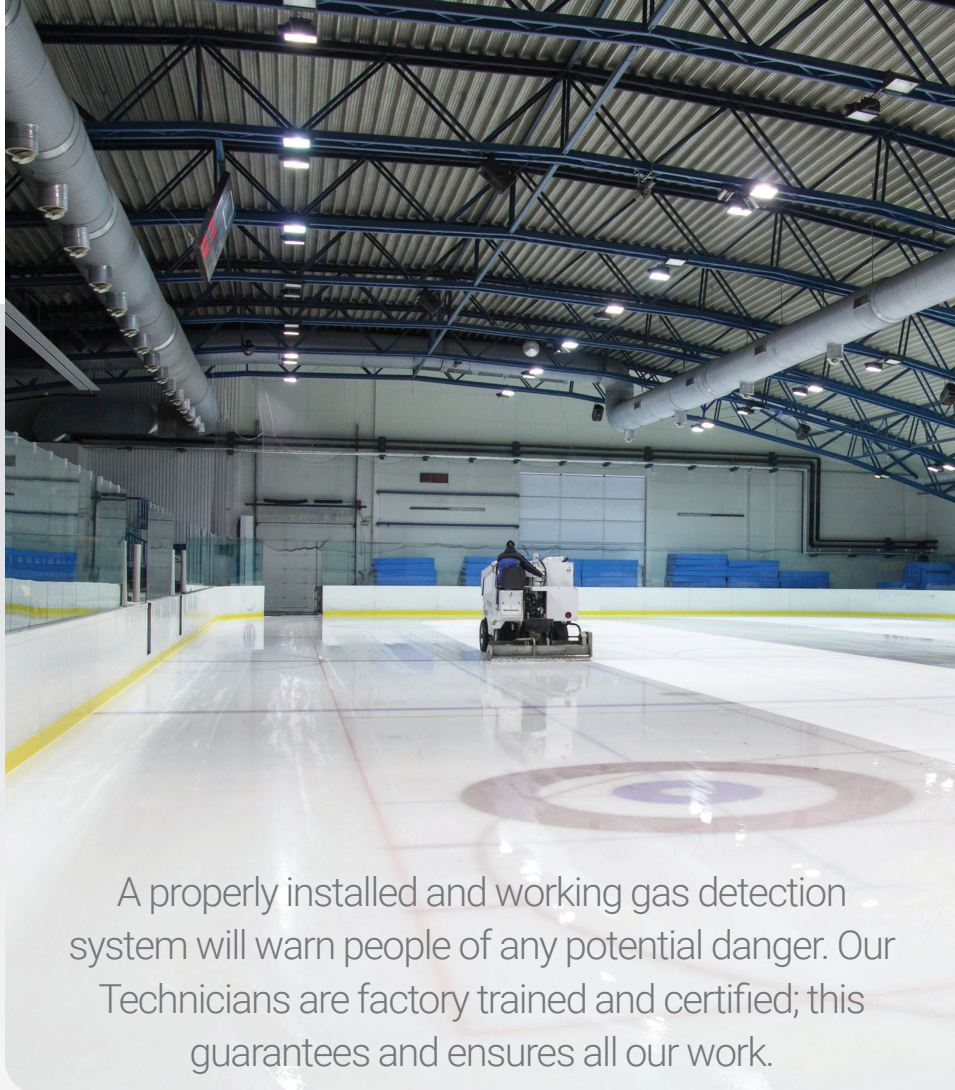

Honeywell

blacklinesafety

EnviroNics®

A properly installed and working gas detection system will warn people of any potential danger. Our Technicians are factory trained and certified; this guarantees and ensures all our work.

Concept Controls helps you find the right gas detectors for every application, from the top brands in the industry.

INDUSTRIAL HYGIENE

Organizations are responsible for monitoring the workplace conditions their employees are working in, identifying hazards that are or could be present, and providing their workers with appropriate protections against those hazards. Concept Controls has carefully assembled a complete line of industrial hygiene products from some of the industries most trusted brands to cover the full spectrum of safety requirements.

Concept Controls is the exclusive distributor for occupational hygiene instrumentation from leading industry manufacturers TSI Inc., Mesa Labs, Quest Technologies and SKC. We carry a complete range of air sampling pumps, sound level meters, noise dosimeters, heat stress monitors, IAQ and Particulate Monitors and Respiratory Fit Testing Equipment from globally recognized brands.

Concept Controls has assembled a complete line of industrial hygiene products from the most trusted brands.

INDUSTRIAL HYGIENE SOLUTIONS

At any time, there can be any number of hazards present or lying dormant in the workplace, so it's important to have the right equipment to keep workers safe. Concept Controls' lineup of industrial hygiene monitoring equipment includes:

Air Sampling Pumps, Calibrators & Accessories

Air Sampling Media & Cassettes

Sound Level Meters

Noise Dosimeters

IAQ & Particulate Monitors & Accessories

Heat Stress Monitors & Accessories

Respiratory Fit Testers

ENVIRONMENTAL MONITORING

Whether monitoring the air for potentially harmful gasses or particles, the soil for industrial or agricultural substances, or a water supply for contaminants, Concept Controls can help determine the right equipment for the job.

ASSESS & MANAGE UNEXPECTED EVENTS

The right environmental monitoring devices can be vital for quickly and effectively dealing with an environmental emergency such as a flood, spill, explosion, or leak. Getting an accurate assessment of the extent of such an emergency can be the difference between effectively containing it before it endangers people, wildlife and the surrounding environment.

Let Concept Controls help you find the right equipment to assess and manage the environmental impact of unexpected events.

EQUIPMENT RENTALS FOR SITE CLEANUP PROJECTS

For some projects, like site cleanup or remediation, renting the testing equipment might make more sense than buying. Talk to one of the experts at Concept Controls about whether renting or owning equipment makes the most sense to your business.

ENVIRONMENTAL MONITORING SOLUTIONS

Trust the team of experts to help choose the right equipment for ongoing environmental monitoring programs, or to assess and manage an unexpected event:

Soil & Air Sampling

Water Quality Monitoring

Ground Water Monitoring

Gas Detection/Monitoring

Leak Detection

FALL PROTECTION

Fall protection is a part of safety equipment that is used to make working at heights safer. Generally, the term refers to any type of planned system to prevent or minimize falls from heights. When used specifically, the term refers to all measures and devices used to prevent a fall from occurring.

Harnesses

CONFINED SPACE

Workers in confined spaces should be hooked up to equipment that can retrieve them if they are overcome by atmospheric conditions, medical episodes or any other possible scenario that disables the worker. You are required to have a plan in place for any confined space entry. Ensure that you have all the requirements for your confined space entry.

WORKING AT HEIGHTS

Working at height is a high-risk activity that refers to work undertaken in any space where, if there were no safety precautions in play, a person could fall a certain distance, resulting in personal injury. In most construction activities, working at height cannot be avoided or done at ground level. Therefore, suitable control measures to address the hazards of working at height will be required.

RESPIRATORY

Respirators protect the wearer from inhaling chemicals and toxic materials. Without them, these hazards could have a devastating impact on the pulmonary and general health of workers. Simply wearing a mask, however, is not enough to ensure adequate protection. A fit test should also be performed any time an employee undergoes a change that could affect how well the respirator fits on them.

Simplify your fit test program with one consistent, objective, quantitative fit testing, such as the TSI PortaCount, to measure the actual amount of leakage into the facepiece and does not rely upon your sense of taste, smell, or irritation in order to detect leakage. SCBA masks, Air Purifying Respirators (APRs), and N95s for medical calls can all be fit tested with the PortaCount platform.

ENGINEERED SOLUTIONS

Innovative Fall Protection Inc. specializes in design, engineering, installation and re-certification of fall protection systems. With over 50 combined years of experience, we are the trusted source for all your fall protection needs. With the help of our designers, engineers, installers, trainers and fabricators your project will be solved on time and on budget. From conception to completion, it all starts with the site specific consultation all the way through design, engineering, installation and training.

CUSTOM ENGINEERED SOLUTIONS

Each application offers its own set of challenges and knowing how to solve is where IFP shines. The solutions we provide are designed and engineered on a case by case basis, making us "true" experts in custom designed fall protection solutions. Be assured that we'll find the solution to match the situation given our tried and tested process.

Identify hazards

Create multiple concepts/options

Provide custom designed solutions

Install with minimum disruption to production/operations

Provide engineered drawings and user manuals

Maximize safety and worker production

Meet and exceed all regulations, acts, standards & codes

Rescue Applications

From conception to completion –
consult, design, supply, engineer, install,
training and re-certification,
IFP has you covered!

SERVICE. RENTAL. EXPERTISE.

The commitment doesn't end once a purchase is complete. With a National Technical Support program, a vast network of factory-trained technicians, and comprehensive calibration and testing programs, Concept Controls continues supporting customers to make sure all equipment and instrumentation is in optimal working order.

Regular service prolongs the life of equipment, as issues can often be identified and corrected before they turn into costly repairs. Scheduled equipment service programs mean fewer equipment purchases, while effectively protecting the most valuable asset, your workers.

UNCOMPROMISING SERVICE STANDARDS

Concept Controls take servicing customers equipment very seriously. Customers rely on Concept Controls for exceptional standards in equipment service and support. Second-best just isn't an option when it comes to protecting workers.

Concept Controls is an authorized warranty/service depot for many of its vendor partners. You can trust that Concept Controls service work lives up to the highest national and international standards.

A PARTNER FOR SHORT-TERM OR TEMPORARY NEEDS

We understand that customers don't always need to purchase equipment, and that sometimes their needs are short-term or temporary. Concept Controls offers a full line of rental equipment for any application. For equipment needed on a one-time project, or while equipment is being serviced or repaired, talk to the experts about rental options.

PUT THE EXPERTISE TO WORK FOR YOU

Concept Controls works together with customers, offering product expertise and practical experience as a resource to benefit from. We provide a turn-key solution of helping customers find the right products and equipment for the job, ensuring workers are getting the highest level of protection and ongoing service that keeps products in optimal working condition. Concept Controls can be trusted and relied on to be an invaluable partner in worker safety.
